Transactions and recovery

A failed transaction rolls back all writes.

The connection remains usable after rollback.

Configuration table

Setting	Value
retry_limit	3
timeout_seconds	30

Code example

```
try:
    transaction.commit()
except ConflictError:
    transaction.rollback()
```

Columns and deployment

Local mode

Local mode needs no server.

Read the index from disk.

Shared mode

Shared mode needs authentication.

Keep collection access isolated.

Raster-only evidence: OCR is deferred.
